# Healthcare?

Healthcare?  
Sick care...

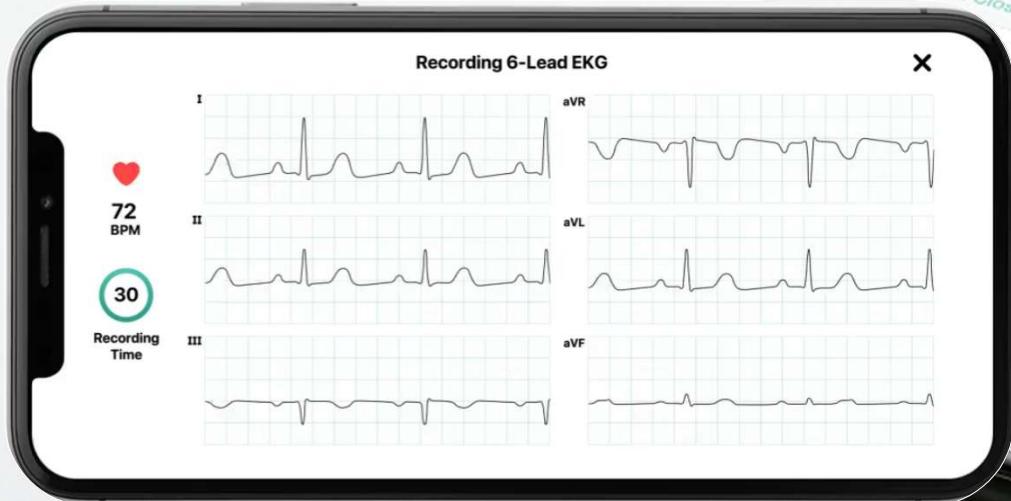

• Healthcare!

# FibriCheck

## Your life in balance

More energy

Sleep well

Happy moments

Good vibrations

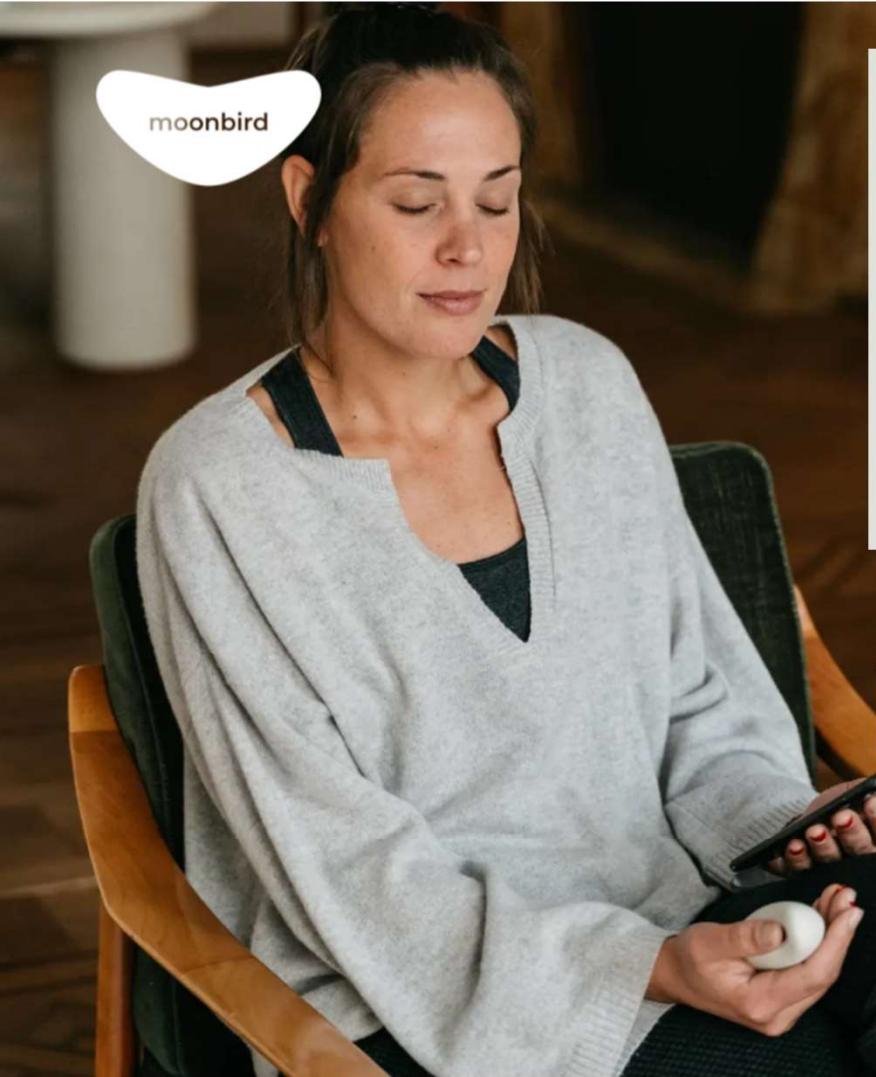

## Mindstretch app information

By wearing your Fitbit device and connect it to [the Mindstretch app](#), insight is given in:

- How much mental energy you are using for your daily activities
- Whether your brain could also regain energy during the day
- How well you recovered during the night and how full your battery is to start the day with
- Which events are giving you energy and which are taking away energy from your body.

The daily balance score (87% in this example) indicates your recovery percentage. If this score is less than 50% at the end of the day, it means that you have spent more mental energy than you could regain mental energy over the last 24hrs. To obtain a correct daily balance score, it is important to monitor day and night (24h/7).

moonbird

## Jouw persoonlijke ademcoach

Bewust ademhalen brengt je terug in contact met je hoofd en lichaam. Vertraag je ademhaling om je stressniveau omlaag te brengen en ontspan direct met eenvoudige ademhalingsoefeningen, allemaal dankzij dit hulppje dat in je handpalm past.

## Onderzoek toont aan: het verband tussen je ademhaling en je gemoedstoestand

Hoe kan het dat wanneer je traag ademt, je tot rust komt, en wanneer je snel en oppervlakkig ademt, de spanning toeneemt?

Digitale tool die gebruik maakt van AI om personen met type 1 diabetes helpt om de bloedsuikerspiegel beter onder controle te krijgen vóór, tijdens en na fysieke activiteit

# DE SLIMME DIABETESASSISTENT

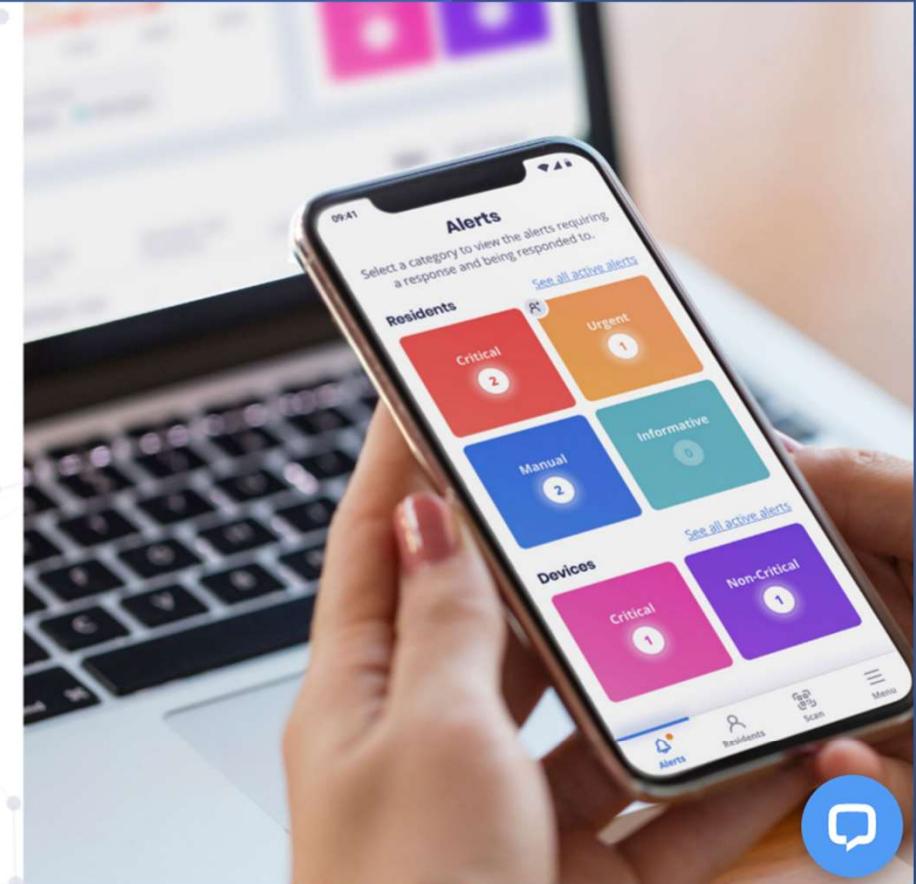

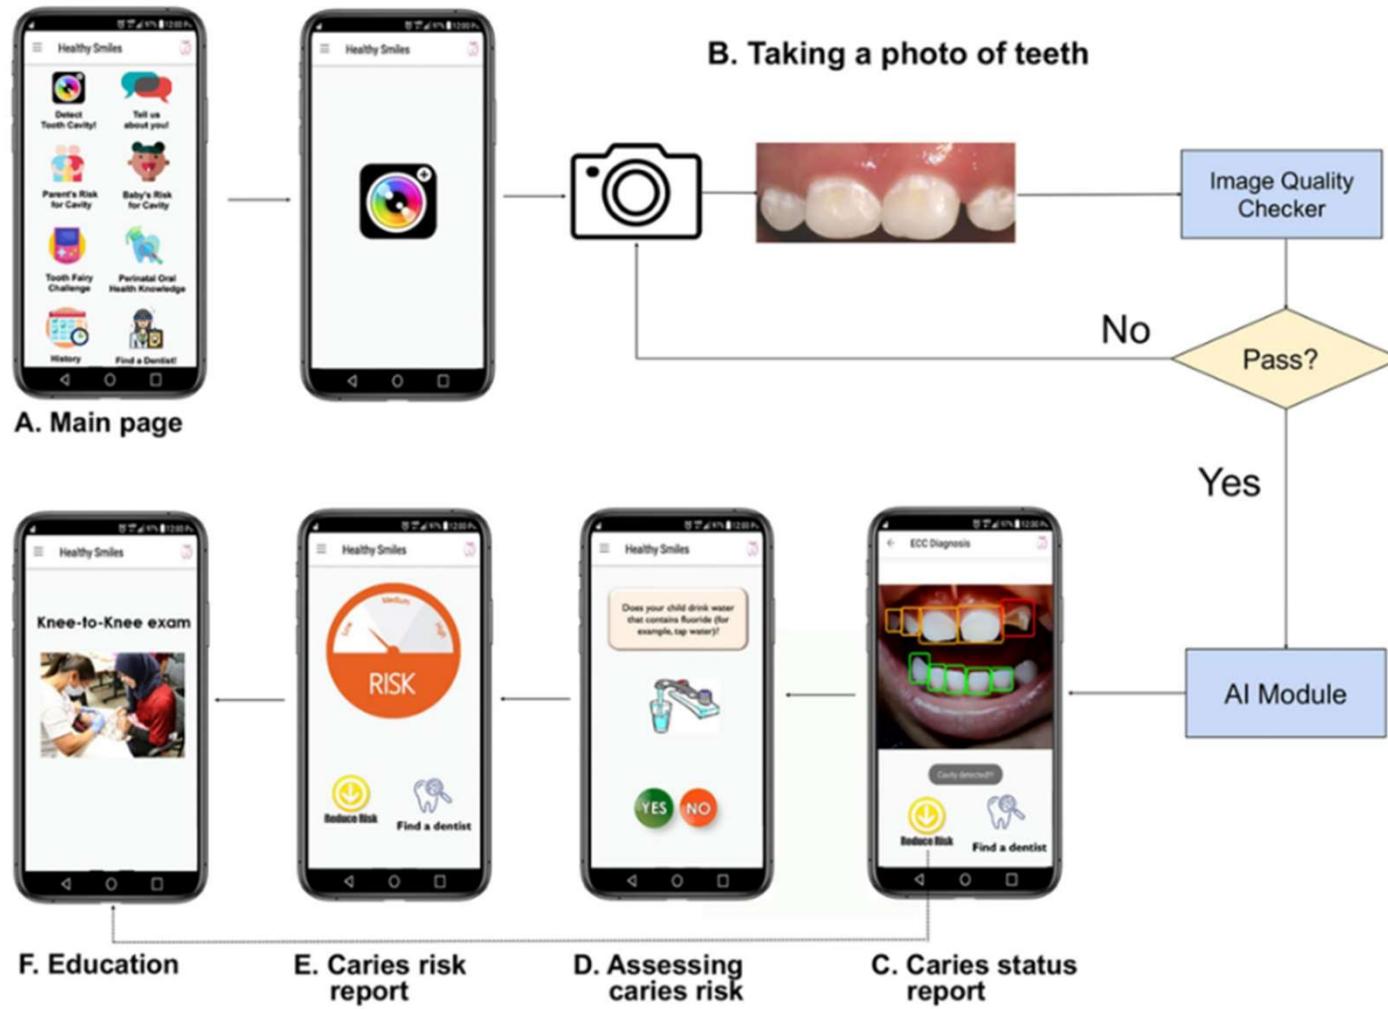

"Great! Now try to lift your hips up a little more."

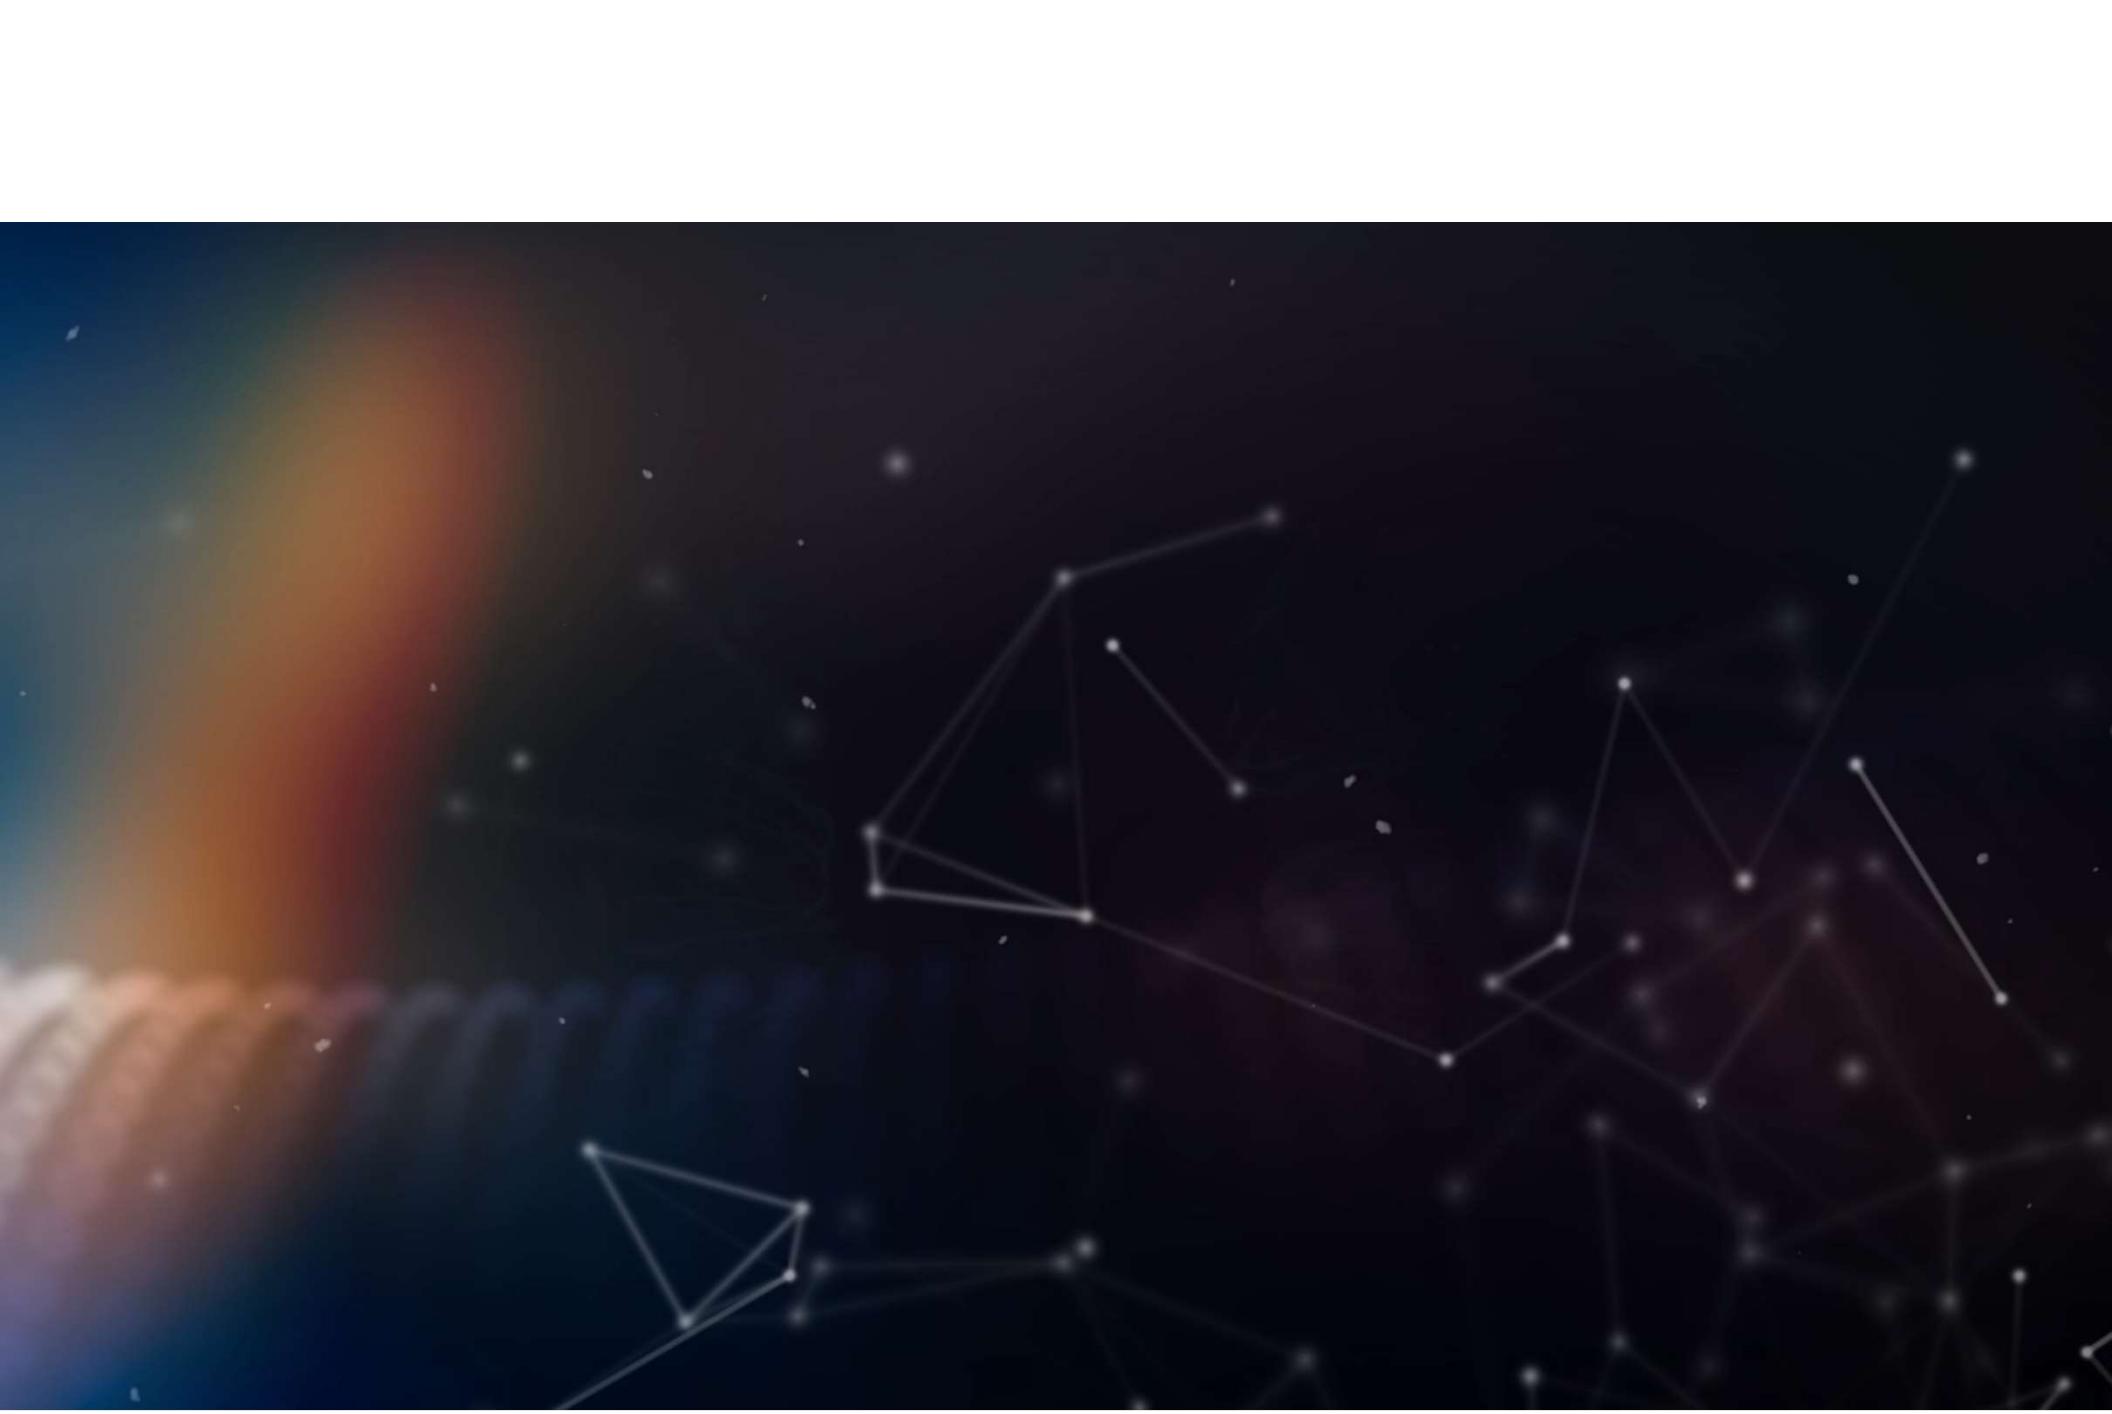

# Watcherr: A health monitoring system

Watcherr provides SaaS and AI to nursing homes, hospitals and people at home through an integrated system of software and hardware. The system continuously monitors the user to identify irregular (health) patterns to predict, notify and prevent emergency situations.

What can Watcherr do?
