

**Over SYSTEMEN,
THEORIEËN en THEOREMA'S**

About SYSTEMS, THEORIES, and THEOREMS

Afscheidscollege, Groningen, 13 januari 2004

OPEN DYNAMICAL SYSTEMS

'system' := the object which we are studying

OPEN DYNAMICAL SYSTEMS

'system' := the object which we are studying

'dynamical' :=
we are interested in its evolution over **time**

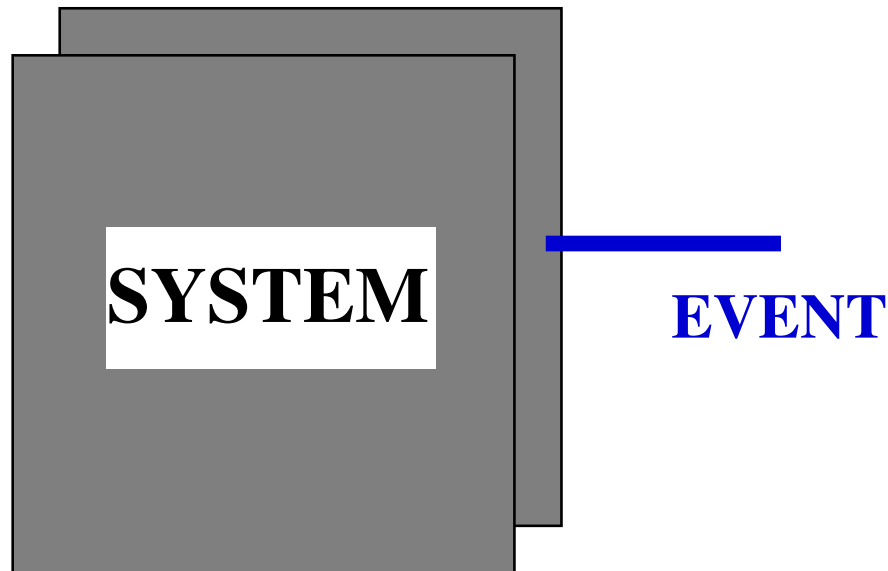

OPEN DYNAMICAL SYSTEMS

‘system’ := the object which we are studying

‘dynamical’ :=
we are interested in its evolution over **time**

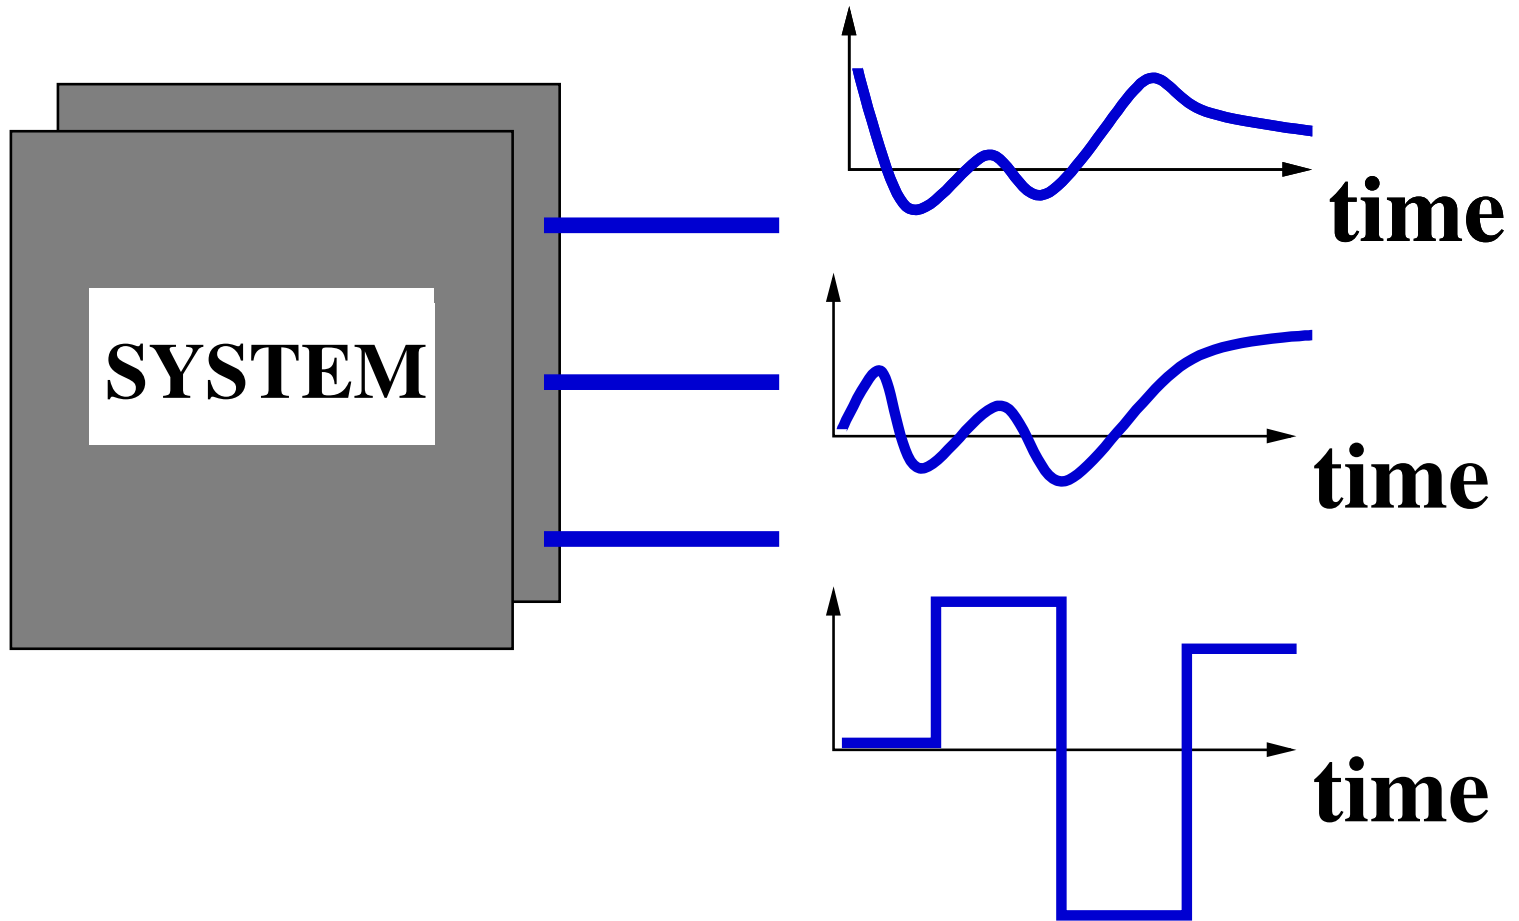

‘open’ :=
the system interacts with its **environment**

The BEHAVIOR

Which event sequences are possible?

The BEHAVIOR

The BEHAVIOR

The behavior =

all trajectories of the system variables which, according to the mathematical model, are possible.

The BEHAVIOR

Totality of 'legal' trajectories =: the behavior

INPUT/OUTPUT SYSTEMS

The HISTORY of I/O SYSTEMS

Lord Rayleigh (1842-1919)

The HISTORY of I/O SYSTEMS

Lord Rayleigh (1842-1919)

Oliver Heaviside (1850-1925)

The HISTORY of I/O SYSTEMS

Lord Rayleigh (1842-1919)

Oliver Heaviside (1850-1925)

Norbert Wiener (1894-1964)

The HISTORY of I/O SYSTEMS

Lord Rayleigh (1842-1919)

Oliver Heaviside (1850-1925)

Norbert Wiener (1894-1964)

Rudolf Kalman (1930-)

MIT, CAMBRIDGE

MIT, CAMBRIDGE

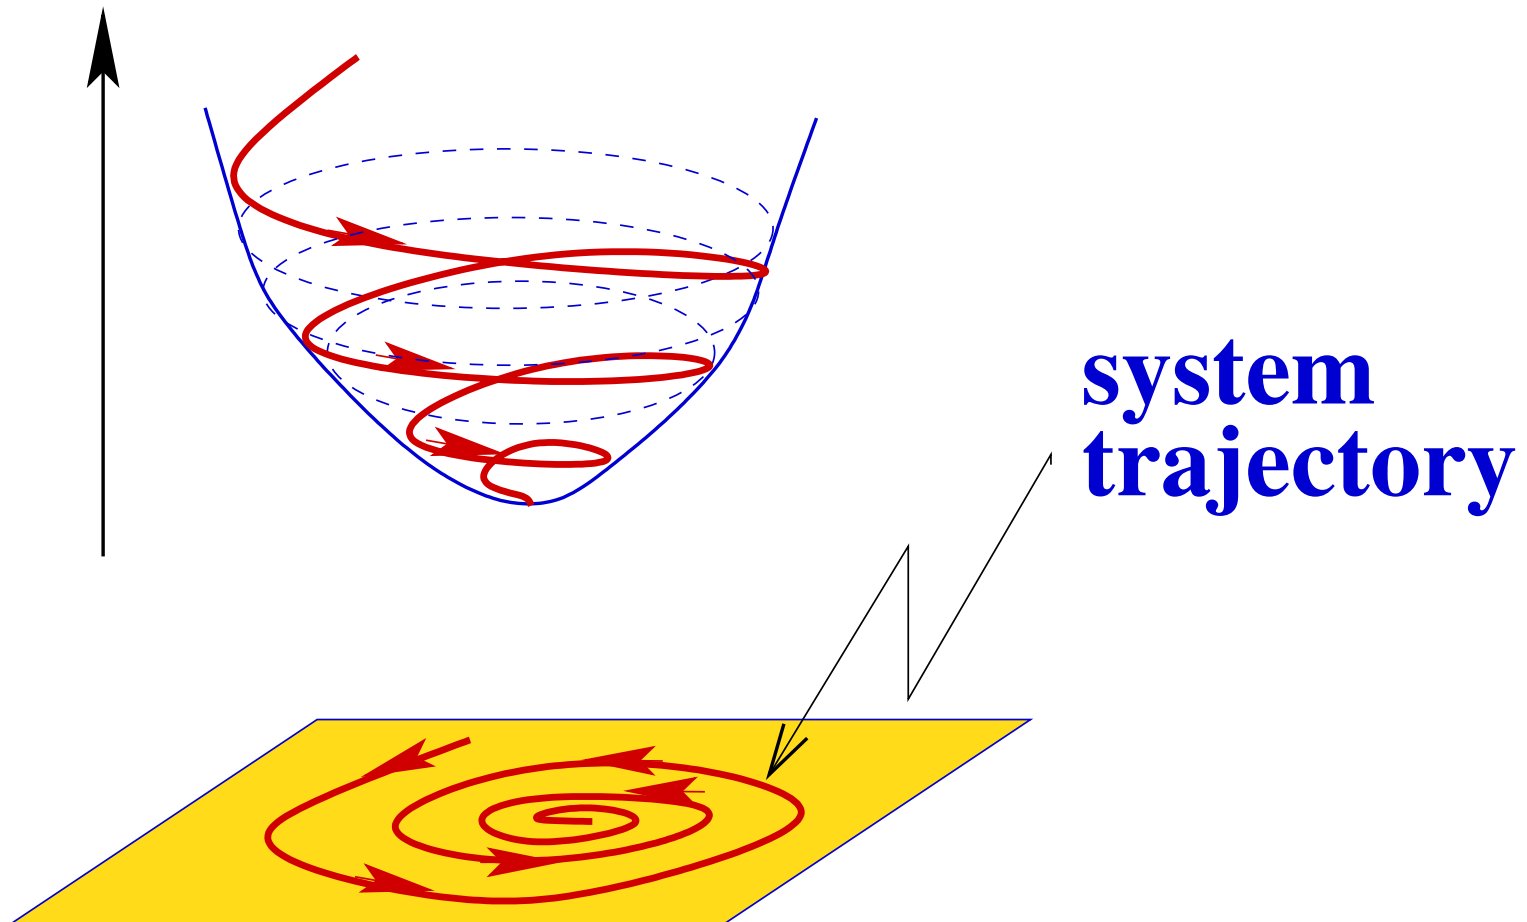

LYAPUNOV FUNCTIONS

Aleksandr Lyapunov (1857-1918)

LYAPUNOV FUNCTIONS

**Lyapunov
function**

DISSIPATIVE SYSTEMS

A system is said to be **dissipative** : \Leftrightarrow

$$\text{Initial storage} + \text{Supply} \leq \text{Final storage}$$

DISSIPATIVE SYSTEMS

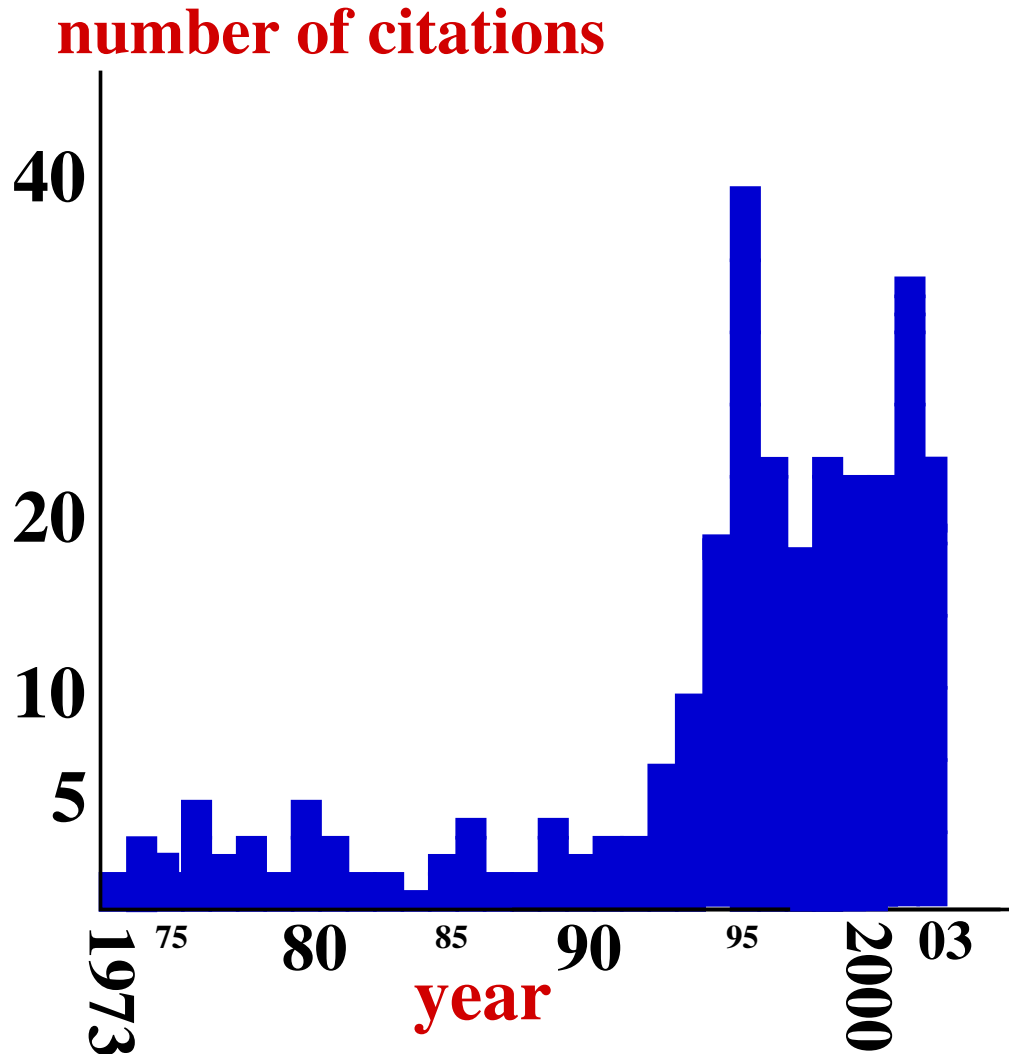

To COUNT or to THINK?

To COUNT or to THINK?

impact factor for year x

$$= \frac{\text{citations in year } x \text{ to articles published in the journal in years } x-1 \text{ and } x-2}{\text{number of articles published in the journal in years } x-1 \text{ and } x-2}$$

To COUNT or to THINK?

Years	Citations
1973-1982	36
1983-1992	31
1993-now	256

AUTONOMOUS SYSTEMS

Autonomous := past implies future

PLANETARY MOTION

How can it move?

PLANETARY MOTION

Johannes Kepler (1571-1630)

PLANETARY MOTION

Kepler's first law

Ellipse, sun in focus

PLANETARY MOTION

Kepler's second law

= areas in = times

PLANETARY MOTION

Kepler's third law

$$(\text{period})^2 = (\text{diameter})^3$$

**Troja, Hiroshima, Srebrenica,
Maar de planeet zij draaide voort!**

The STATE of the PLANET

The state = position and velocity

The EQUATION of the PLANET

acceleration = function of position and velocity

$$\frac{d^2}{dt^2}w(t) = F\left(w(t), \frac{d}{dt}w(t)\right)$$

The EQUATION of the PLANET

acceleration = function of position and velocity

$$\frac{d^2}{dt^2}w(t) = F\left(w(t), \frac{d}{dt}w(t)\right)$$

$$\frac{d^2}{dt^2}w(t) + \frac{1_{w(t)}}{\left|\frac{d}{dt}w(t)\right|^2} = 0$$

Isaac Newton (1643-1727)

**Hypotheses
non
fingo**

Isaac Newton (1643-1727)

NEWTON'S LAWS

Newton's 2nd law: force = mass * acceleration

$$F'(t) = m \frac{d^2}{dt^2} w(t)$$

NEWTON'S LAWS

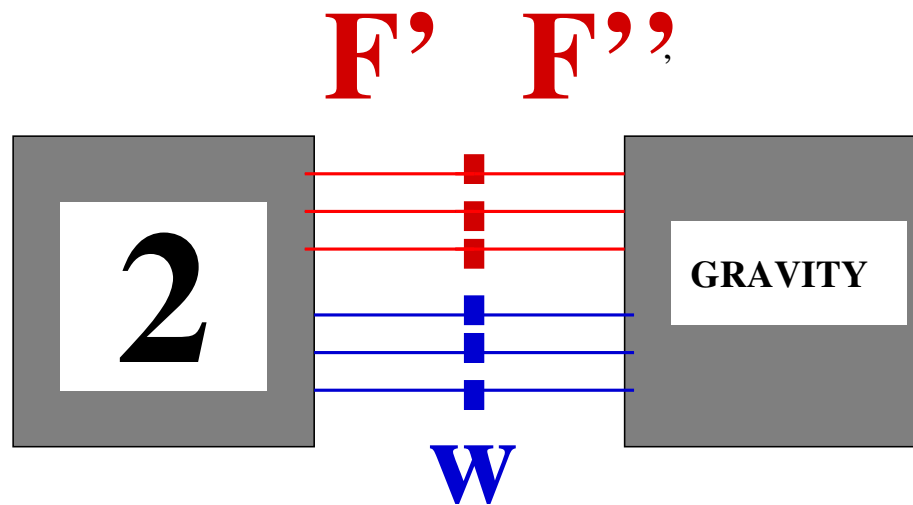

The law of gravitation: attraction = $\frac{\text{mass}}{(\text{distance})^2}$

$$F''(t) = m \frac{1_{w(t)}}{\left| \frac{d}{dt} w(t) \right|^2}$$

NEWTON'S LAWS

Newton's third law: the sum of the forces = 0

$$F'(t) + F''(t) = 0$$

NEWTON'S LAWS

$$F'(t) = m \frac{d^2}{dt^2} w(t)$$

$$F''(t) = m \frac{1_{w(t)}}{\left| \frac{d}{dt} w(t) \right|^2}$$

$$F'(t) + F''(t) = 0$$

$$\frac{d^2}{dt^2} w(t) + \frac{1_{w(t)}}{\left| \frac{d}{dt} w(t) \right|^2} = 0$$

The HISTORY of CLOSED SYSTEMS

Henri Poincaré (1854-1912)

George Birkhoff (1884-1944)

Stephen Smale (1930-)

A system as a behavior

A fully general, consistent state construction

The BRACHISTOCHRONE

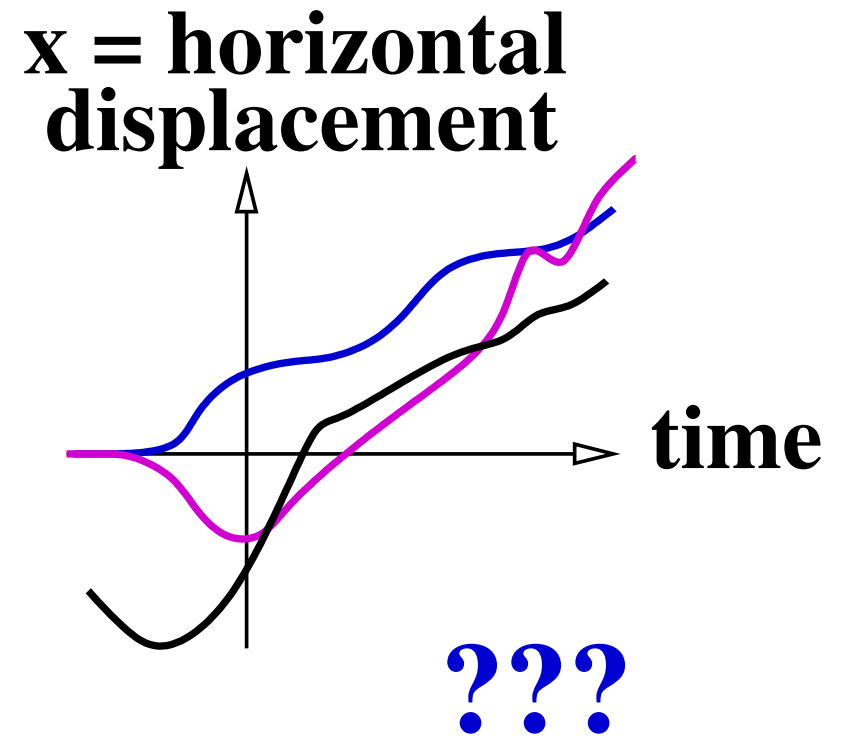

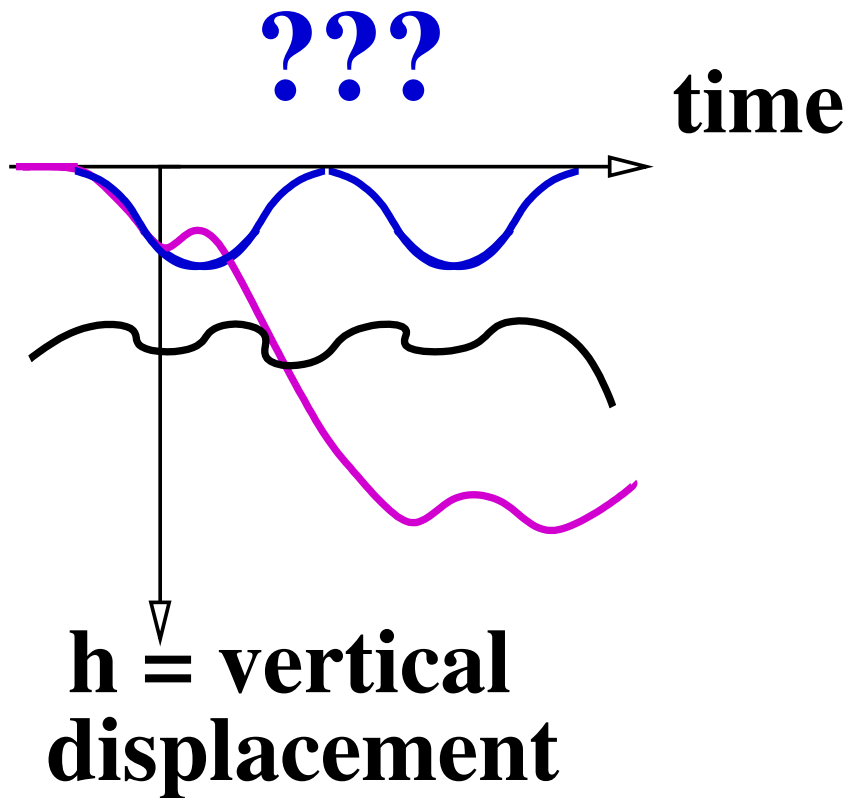

Johann Bernoulli (1667-1748)

The BRACHISTOCHRONE

Let the ball roll as fast as possible from A to B !

The BRACHISTOCHRONE

What is the behavior?

The BRACHISTOCHRONE

conservation of energy \Leftrightarrow

vertical displacement = (velocity)²

$$h = \left(\frac{d}{dt}h\right)^2 + \left(\frac{d}{dt}x\right)^2$$

\Rightarrow **Behavioral equation,** defines the behavior.

**Prima la Musica,
poi le Parole.**

**Prima la Musica,
poi le Parole.**

**Prima la Física,
poi la Matematica.**

RECAPITULATION

A dynamical system = a behavior

RECAPITULATION

A dynamical system = a behavior

**From Kepler (closed system)
to Newton's second law (open system)**

RECAPITULATION

A dynamical system = a behavior

**From Kepler (closed system)
to Newton's second law (open system)**

Dissipative systems

RECAPITULATION

A dynamical system = **a behavior**

From Kepler (closed system)
to Newton's second law (open system)

Dissipative systems

Almost invariant subspaces,

disturbance decoupling,

pole placement by static feedback,

instability by disc encirclement,

multipliers, . . .

Mais ou sont les neiges d'antan?
